

## Practical Tip: Exporting Joinings and Fates to Breedplan

Go to File> Export Options > Breedplan Joinings/Fates Exports

Within this screen (below) you can choose to export either Mating Data or Fate Data. You must select the destination drive and directory where you wish the exported file to be saved.

It is important to enter the correct dates for the current joining season/fate reporting period. These dates are mandatory.

The file will be given a default name of <u>CalfDays.dat</u>, however you can change this name if you wish.

Click OK to proceed.

This will take you to the <u>Days to Calving</u> export screen which lists all of the eligible Dams to be added.

Click BACK to edit, click OK to continue export.

Note: It is important that once the <u>CalfDays.dat</u> or <u>FateData.dat</u> files are created they are not opened. Opening this file will alter the way it is formatted and the society will not be able to read it.
