How to complete your mature cow weight forms

1. Date
The date the mature cow weight forms were produced is specified. The information pre-printed on the forms will reflect the information recorded with your Breed Society/Association on this date.

2. Cow Details
The sire & date of birth of the cow are pre-printed for each cow as an easy reference to the details already stored for that animal. If any of these details are INCORRECT, provide your Breed Society/Association with the CORRECT details.

3. Weight Units
Circle the units in which the weights have been recorded (ie kilograms).

4. Cow Ident
The ident for each cow is pre-printed (usually listed in tattoo order). All females recorded with your Breed Society/Association as being active, in your ownership and greater than 2 years of age will be printed.

5. Disposal
If the cow is no longer active in the herd, enter the relevant disposal code in this column (see bottom of each page for a list of the relevant disposal codes for your Breed Society/Association).

6. Date
Record the weigh date (or the date of disposal) in this column. (eg. 20-05-10). If the weigh date is the same for all animals, simply enter the date against the first animal and draw an arrow down the column.

7. Wt.
Record the mature weight to the nearest pound or kilogram in this column. Remember BREEDPLAN can only include mature cow weights that have been recorded within two weeks of the 200 day weight submitted for their calf.

8. Sub Grp
Enter a management group code for any cow that has experienced any effects on her weight that is different to that experienced by her calf. For example, if the cow was injured/sick. If no management group information is specified, BREEDPLAN analysis will use the management groups submitted with the weaning weights of the calves to sub-group the weights of the cows.

9. Dry
If the cow was “Dry” at weighing (ie. Did not raise a calf to weaning), enter a “D” in this column.

10. Cond
Enter the condition score for the cow in this column. The standard fat scoring system of 1-6 must be used. This fat scoring system can be found on the BREEDPLAN website. Only whole scores will be used.

11. Hip Ht
If a hip height is measured, record the height (in whole cm) in this column. E.g. 126.
