HOW TO COMPLETE YOUR PERFORMANCE RECORDING FORMS

1. Suggested Weighing Dates
These dates indicate when the calves listed on the form are on average 200, 400 and 600 days of age, based on their birth dates. The suggested weigh dates should be used as a guide as to when to weigh your animals.

2. Calf Details
Dam, date of birth, last weighing date weight and management group are pre-printed for each calf as an easy reference to the details already stored for that calf. If any of these details are INCORRECT, provide the CORRECT details to your Breed Society/Association.

3. Calf Ident
The animals are listed in tattoo order within each report. The relevant details on calving year, season of birth & sex are given at the top of the page.

4. Wean Date
Record the date when the calf was weaned (or separated from its mother) in this column.

5. Disposal Code
If the calf is no longer active in the herd, enter the relevant disposal code in this column (see the bottom of each page for a list of the relevant disposal codes for your Breed Society/Association).

6. Date
Record the weigh date (or the date of disposal) in this column. (eg. 20-05-10). If the weigh date is the same for all animals, simply enter the date against the first animal and draw an arrow down the column.

7. Weight
Record the weight to the nearest kilogram in this column. Animals must be between 80 to 900 days of age to have post-birth weights analysed by BREEDPLAN.

8. Man. Group
Record the calf management group in this column. A management group should be entered if a calf or group of calves have been treated differently since the previous weighing.

9. Desex Date
If the calf was castrated prior to the day of weighing, enter the castration date in this column.

10. Hip Ht
If a hip height is measured, record the height (in whole cm) in this column. (e.g. 126).

11. Scrotal Circ.
If a scrotal circumference is measured, record the size (in cm) in this column. (e.g. 35.5). Bulls must be between 300 to 700 days of age when measured.
